

Pride® Lifts

Outlander XL

The **Outlander XL Lift** is a two-rail scooter lift specifically designed for larger 4-wheel scooters. The extra-large rails and integrated automatic scooter lockdown arm is designed to provide a secure self-locking mechanism for compatible 4-wheel scooters. The simple hitched-based installation requires little to no modification to your vehicle or mobility device and allows for easy removal. The drive-on/drive-off platform enables loading from either end of the lift and takes the hassle out of loading your mobility scooter in a busy parking area.

FEATURES AND BENEFITS

- 350 lb (158.8 kg) lifting capacity
- Compatible with Class III or IV hitches
